LACQUER BASED PAINT

The new Real Colors paint range is a very special step forward for AK. AK Real Colors are state-of-the-art lacquer based paints developed in our own laboratories. Our goal was to create the highest quality paint with a chemical formula and color accuracy superior to other brands on the market.

La nueva gama de pinturas Real Colors supone un paso adelante muy especial para AK. AK Real Colors son pinturas a base de laca de última generación desarrolladas en nuestros propios laboratorios. Nuestro objetivo ha sido crear una pintura de máxima calidad con una fórmula química y una precisión de color superiores a las de otras marcas del mercado.

ACCURACY 180 COLORS

UPDATED RANGE

- ◀ IMPROVED FORMAT
- ◀ 24 NEW COLORS
- ◀ UNSURPASSED COLOR ACCURACY

THE NEW BOTTLE: REAL COLORS TOP TO BOTTOM.

*Our updated range of colors required improved packaging.
We're therefore pleased to introduce our brand new 17 ml plastic bottle with dropper!*

NEW FORMAT. INCREASED CAPACITY

The Real Colors range was initially available in 10 ml glass bottles, typically used for this type of paint, but we have now managed to introduce a more user-friendly packaging in the form of 17 ml plastic dropper bottles.

La gama Real Colors estaba disponible inicialmente en frascos de vidrio de 10 ml, típicos de este tipo de pinturas, pero ahora hemos conseguido introducir un envase más fácil de usar, en forma de frascos de plástico de 17 ml con cuentagotas.

NEW CAP

Easily recognizable.
Distinctive and exclusive.
Rápidamente identificable.
Característico y exclusivo.

NEW DISPENSER

The new bottle features a dropper which allows for easier loading of the paint into your airbrush cup and creating custom color mixes with more precision.

Incluyen un dosificador que nos permitirá realizar mezclas de manera más precisa. Además nos resultará más cómodo verterla en la copa del aerógrafo y también conservarlas mejor.

SAME FORMULA. TOP QUALITY AS ALWAYS.

MISMA FÓRMULA. MÁXIMA CALIDAD, COMO SIEMPRE.

DESIGNED FOR AIRBRUSHING

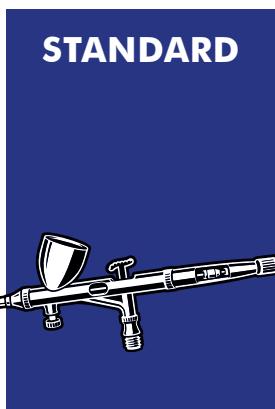

UPDATED RANGE

3 Families
Familias

3 Ranges
Gamas

The new Real Colors range currently consists of 180 colors, including 26 basic colors, 130 military colors and 24 new colors specially developed for painting model cars and motorbikes.

La nueva gama Real Colors consta actualmente de 180 colores, entre los que se incluyen 26 colores básicos, 130 colores militares y 24 nuevos colores especialmente desarrollados para pintar maquetas de coches y motos.

26 colors

Standard colors are the basic shades that are most commonly used in all modeling branches. Also included are the clear colors and varnishes.

Los colores standard son los tonos más comúnmente usados en distintas ramas modelísticas. Incluyen tonos básicos como los colores Clear, barnices, etc.

24 new colors

This range is developed for painting car and motorcycle models, including the most popular colors used by iconic manufacturers such as Renault, Ferrari, Alfa Romeo, Lotus, Subaru, Ducati, Kawasaki, etc. Together with the range of standard colors suitable for interiors and details, it is the combination that any car or motorbike modeler needs.

El rango de colores para modelismo civil incluye los colores más populares usados por diferentes marcas como Renault, Ferrari, Alfa Romeo, Lotus, Subaru, Ducati, Kawasaki, etc. Junto con el rango de colores standard para interiores y pequeños detalles, resulta la combinación perfecta que cualquier modelista de vehículos civiles necesita.

130 colors

The military range covers both the aircraft and AFV colors from the 1930s to the present day. Many of them are referenced to the RAL, Federal Standard or British Standard color systems, whilst the others are based on the period color samples or reproduced original formulas.

El rango de colores militares abarca tanto los colores utilizados para aviones como para vehículos terrestres desde la década de los años 30 hasta la actualidad. Algunos colores están referenciados a cartas RAL, Federal Standard o British Standard, y otros están basados en colores originales.

ACCURACY

The composition of the color can be determined using current technology with a +/- 1% error, depending on the pigments used, the specific colors and the state of conservation. The technique used to discover the originally used pigments is based on the color curve in the visible spectrum band. The perception of the color depends on the type of illuminant or light that affects the object, and the human eye that observes the object.

La composición del color puede determinarse utilizando la tecnología actual con un error de +/- 1%, dependiendo de los pigmentos utilizados, los colores específicos y el estado de conservación. La técnica utilizada para descubrir los pigmentos utilizados originalmente se basa en la curva de color en la banda del espectro visible. La percepción del color depende del tipo de iluminante o luz que incide sobre el objeto, y del ojo humano que observa el objeto.

Various factors can alter the perception of color, so a spectrophotometer is used to apply the light (daylight, incandescent and fluorescent) in the same way every time to collect a consistent, objective color curve. That color curve would be of a determined color, with a determined illuminant and composed of several pigments. We must find out the pigments and their combination to get a color curve which matches the curve generated by the original sample.

A certain color can be arrived at in different ways and with different pigment mixtures, but only one of them is the one that will accurately reproduce the original pigment mixture with exactly the same curve under all illuminants. That is the real color and that is what has been sought after in this range of paints.

* We appreciate the combined effort of our experts, the study, the field and laboratory work, which together have provided the most detailed and meticulous study ever undertaken by a paint brand to create our accurate Real Colors.

To accurately reproduce the original colors of the Real Colors paint range, we have studied both officially issued paint samples and real, unrestored preserved equipment. We have also enlisted the help of recognised experts, museums and independent laboratories.

Para reproducir con exactitud los colores originales de la gama de pinturas Real Colors, hemos estudiado tanto las muestras de pintura emitidas oficialmente como equipos reales conservados sin restaurar. También hemos contado con la ayuda de expertos reconocidos, museos y laboratorios independientes.

Diversos factores pueden alterar la percepción del color, por lo que se utiliza un espectrofotómetro que aplica la luz (diurna, incandescente y fluorescente) de la misma manera cada vez, para recoger una curva de color coherente y objetiva. Esta curva de color sería de un color determinado, con un iluminante determinado y compuesta por varios pigmentos. Debemos averiguar los pigmentos y su combinación para obtener una curva de color que coincida con la curva generada por la muestra original.

A database maintains the characteristics of each original pigment and its specific curve, so a program can match and select the right ones for the color curve to be the same under all three illuminants.

Una base de datos mantiene las características de cada pigmento original y su curva específica, de modo que un programa puede emparejar y seleccionar los adecuados para que la curva de color sea la misma bajo los tres iluminantes.

Se puede llegar a un determinado color de diferentes formas y con distintas mezclas de pigmentos, pero sólo uno de ellos es el que reproducirá con precisión la mezcla original de pigmentos con exactamente la misma curva bajo todos los iluminantes. Ese es el color real y lo que se ha buscado en este rango de pinturas.

* Agradecemos el esfuerzo combinado de nuestros expertos, el estudio el trabajo de campo y de laboratorio, que conjuntamente han proporcionado el estudio más detallado y meticuloso realizado por una marca de pintura para crear nuestros precisos Colores Reales.

REAL. COLORS

CHARACTERISTICS AND PROPERTIES - THE BASIC FEATURES OF REAL COLORS: CARACTERÍSTICAS Y PROPIEDADES - BÁSICAS DE REAL COLORS:

Dilution

Real Colors can be thinned with our specific RC701/702 High Compatibility Thinner and also with Tamiya yellow cap thinner, Mr. Color Thinner, Mr. Color Leveling Thinner or other thinners intended for lacquer based paints.

Las pinturas Real Colors pueden diluirse con nuestro diluyente específico RC701/702 High Compatibility Thinner y también con el diluyente 'yellow cap' de Tamiya, Mr. Color Thinner, Levelling Thinner, u otros diluyentes destinados a pinturas a base de laca.

Compatibility

Real Colors are highly compatible with other lacquer based paints and can be mixed with them to obtain mid-tones or different colors.

Las pinturas Real Colors son altamente compatibles con otras pinturas a base de laca y pueden mezclarse para obtener tonos medios o diferentes colores.

Resistance

Real Colors paint resists all types of weathering.

The paint adheres and dries perfectly with a smooth finish, so that various treatments and/or aggressive techniques can be applied to it.

Las pintura Real Colors resisten todo tipo de weathering. La pintura se adhiere y seca perfectamente con un suave acabado, para que pueda aplicarse sobre ella distintos tratamientos y/o técnicas agresivas.

Flow

Real Colors flow smoothly in the airbrush. Airbrushing is a real pleasure, thanks to its chemical composition. Even if the surface becomes too wet, the paint levels out and dries with a realistic finish.

No flow improvers or drying retardants are needed.

Real Colors fluye suavemente en el aerógrafo. Aerografiar es un auténtico placer, gracias a su fórmula química. Aunque se encharque demasiado la superficie, la pintura se nivele y se seca con un acabado realista. No se necesitan mejoradores de flujo ni retardantes de secado.

RECOMMENDATIONS

1. Materials

During the painting process it is recommended having a rag nearby and a cleaning product for tools. It is also advisable having a large brush at hand for removal of paint and thinner from the airbrush cup.

For diluting Real Colors lacquer based paints always use a specific thinner (AK RC701/RC702 High Compatibility Thinner, Mr.Color Thinner, Tamiya yellow cup thinner).

2. Ratios

The paint must be thinned to flow well in the airbrush. Mixing ratios will depend on the application, whether it is a base coat or a freehand camouflage. Dilution also depends on the preference of the individual modeler. Working with thin layers of paint allows for better control of the paint application.

• **Base coats:** approximate 30/70 to 35/65 paint/thinner ratio.

• **Camouflage patches/lines etc.:** approximate ratio of 15/85 to 25/75 paint/thinner.

Lacquer type paints are very tolerant to different dilution ratios. It is possible to paint with ratios up to 9:1 (thinner: paint).

3. Working pressure

It should be stable, whenever possible use a compressor with a tank.

It varies between 1.2 to 1.5 bar (17 to 22 psi) depending also on the ratio of the mixture used.

4. Working distance

The distance between the airbrush and the piece will depend on the airbrush you are using and the type of finish you are looking for. Generally about 10cm is an adequate distance.

We have to take into account that during the painting process we can vary the dilution, the distance and the air pressure to work comfortably and achieve satisfactory results. Working with an airbrush requires learning.

5. Cleaning

Lacquers are easy to clean. Rinsing the airbrush with lacquer thinner allows you to quickly remove any paint residue after application.

6. Drying time

Lacquer type paints are very fast drying. For handling it is only necessary that they are dry to the touch. The drying time will depend on the paint layer and the temperature conditions of the room. In general, if we want to apply other colors or weathering effects to the model, it is advisable to let the paint cure well before proceeding. To be on the safe side, allow at least 2 hours after applying the color coat. If we want to apply masking tape for modeling, and airbrush the next color normally, it is recommended to wait 4 hours.

RECOMENDACIONES

1. Materiales

Durante el proceso de pintura se recomienda tener cerca un trapo y un producto de limpieza para las herramientas. También es aconsejable tener a mano un pincel grande para eliminar la pintura y el diluyente de la copa del aerógrafo. Para diluir las pinturas Real Colors a base de laca utilice siempre un diluyente específico (AK RC701/RC702 High Compatibility Thinner, Mr.Color Thinner, Thinner Tamiya tapón amarillo)

2. Ratios

La pintura debe estar diluida para que fluya bien en el aerógrafo. Los ratios de mezcla dependerán de la aplicación, ya sea una capa base o un camuflaje realizado a mano alzada. La dilución también depende de las preferencias de cada modelista. Trabajar con capas finas de pintura permite un mejor control del trabajo.

• **Bases:** ratio orientativo aproximado de un 30/70 a un 50/50 de pintura/diluyente

• **Camuflajes:** ratio aproximado de un 20/80 a un 30/70 de pintura/diluyente

Las pinturas tipo laca son muy tolerantes a diferentes proporciones de dilución. Se puede pintar con ratios hasta 9:1 (diluyente: pintura).

3. Presión de trabajo

Debe ser estable, siempre que sea posible utilizar un compresor con calderín.

Varía entre 1.2 a 1.5 bares dependiendo también de los ratios de la mezcla usada y de las preferencias de cada modelista.

4. Distancia de trabajo

La distancia entre el aerógrafo y la pieza va a depender del aerógrafo que estemos usando y del tipo de acabado que estemos buscando. Por lo general unos 10cm es una distancia adecuada.

Hemos de tener en cuenta que cuando pintamos podemos variar la dilución, la distancia y la presión de aire para trabajar cómodamente y lograr unos resultados satisfactorios. Trabajar con aerógrafo requiere aprendizaje.

5. Limpieza

Las lacas se limpian fácilmente. Enjuagar el aerógrafo con diluyente de laca permite eliminar rápidamente cualquier residuo de pintura después de la aplicación.

6. Tiempo de secado

Las pinturas de tipo laca ofrecen un secado muy rápido. Para manipular las piezas basta con estar secas al tacto. El tiempo de secado varía dependiendo de la capa de pintura y de las condiciones de temperatura del recinto. De forma general, si queremos aplicar otros colores o efectos de weathering al modelo, es conveniente dejar que la pintura cure bien antes de continuar. Para estar seguros dejaremos pasar al menos 2 horas tras aplicar la capa de color. Si queremos aplicar cinta de enmascarar para modelismo, y aerografiar el siguiente color con normalidad, se recomienda esperar 4 horas.

DIFFERENCES | ACRYLICS - ENAMEL - LACQUERS

WHY WHEN LACQUERS?

ACRYLICS

Acrylic paints are the most common and popular type of paint among modelers. Most acrylic paints are water-based, which means they are easy to clean up with water and they are non-toxic.

They are excellent for brush painting and dry quickly. There are different mediums available to speed up or slow down the drying time for blurring effects or different techniques.

Water-based acrylic paints are highly recommended for painting figures and details.

ENAMEL

Enamel paints are oil-based, durable but more toxic compared to acrylic paints. They have significantly longer drying time in comparison with lacquers and acrylic paints.

Once the enamels dry, they create very resistant layers which is useful if you want to touch your models frequently. Because they dry slowly, they tend to show fewer brush strokes as they are generally self-leveling.

Unlike acrylics, enamel paints need an enamel thinner for dilution and general clean-up. It is recommended using effective room ventilation when working with them.

LACQUERS

Lacquers are durable, fast drying paints made from synthetic resins.

Lacquer paints are solvent based. Although lacquer paints are not the most suitable for brush painting, they are excellent for airbrushing, offering great coverage and smooth application. They dry faster than other types of paint and allow for creation of the most durable paint layer. Some brands are very popular with modelers because of the wide range and reliable colors.

They are used with lacquer thinners and are compatible between different brands. It is recommended using effective room ventilation when working with them.

ACRÍLICOS

Las pinturas acrílicas son el tipo de pintura más común y popular entre los modelistas. La mayoría de las pinturas acrílicas son a base de agua (algunas incluyen alcohol en su fórmula), lo que significa que son fáciles de limpiar con agua y no son tóxicas.

Son excelentes para pintar a pincel y se secan rápidamente. Existen distintos medios para acelerar o retardar el secado si queremos realizar efectos de difuminado o distintas técnicas.

Las pinturas acrílicas al agua son altamente recomendables para pintar figuras y detalles.

ESMALTES

Las pinturas de esmalte tienen una base de aceite, son duraderas pero más tóxicas en comparación con las acrílicas. Tienen un secado considerablemente más largo en comparación con las lacas y las pinturas acrílicas.

Una vez secas, el esmalte es una pintura muy resistente y resulta útil si deseas manipular tus modelos con frecuencia. Debido a que se secan lentamente, tienden a mostrar menos pinceladas ya que generalmente se autonivelan.

A diferencia de las acrílicas, las pinturas de esmalte necesitan un diluyente de esmalte para la dilución y la limpieza general. Se recomienda usar con suficiente ventilación cuando se trabaja con ellas.

LACAS

La pintura tipo laca es una pintura duradera y de secado rápido elaborada con resinas sintéticas.

Las pinturas de laca tienen base de disolvente. Aunque las pinturas de laca no son las más adecuadas para pintar con pincel, son excelentes para aerografía, ya que ofrecen una gran cobertura y una aplicación suave. Se secan más rápido que otros tipos de pintura y permiten crear la capa de pintura más duradera. Algunas marcas son muy populares entre los modelistas por su gran gama y colores fidedignos.

Se utilizan con disolventes para lacas y son compatibles entre diferentes marcas. Se recomienda el uso con suficiente ventilación cuando se trabaja con ellas.

The sets offer a convenient way of obtaining specific colors for a specific military branch in a specific period.

The rear sides of the boxes feature profile guides showing samples of typical color combinations and schemes, but the included colors can be used for many other subjects, carrying different painting finishes. It is recommended checking further reference sources when painting your model kit.

Los sets ofrecen una forma práctica de obtener colores específicos para una rama militar concreta en un periodo concreto.

En la parte posterior de las cajas se incluyen guías de perfiles que muestran ejemplos de combinaciones y esquemas de color típicos, pero los colores incluidos pueden utilizarse para otras temáticas, con diferentes acabados de pintura. Se recomienda consultar fuentes de referencia cuando pinte su maqueta.

C I V I L								
RC827	Solid White	-	-	-	-	-		
RC828	British F1 Black 1972-1986	-	-	N5-C174	-		ZP-1121	Used for painting Lotus Formula 1 cars in the famous JPS livery from 1972 to 1986.
RC829	Carbon Fibre Grey	-	-	-			ZP-1323	Used for applying a basecoat under clear carbon fibre decals.
RC830	Wheel Rim Gold	-	-	N5-X082	MRP-C016		ZP-1575	Used for painting BBS wheels.
RC831	Fork Gold	-	-	-			ZP-1432	Used for painting motorcycle forks.
RC832	Alfa BT Red	-	-	N5-C021	-		ZP-1091	Used as the base color of Brabham-Alfa Romeo BT45B, BT46, BT46B, BT48 racing cars.
RC833	Maranello F1 Red 1970s-1980s	-	-	-	-		ZP-1007	Used as the base color of Ferrari F1 cars in the 1970s-1980s, including models 312B, 312B2, 312B3, 312T, 312T2, 312T2B, 312T3, 312T4, 312T5, 126C, 126CK, 126C2, 126CB, 126C3, 126C4, 156/BS.
RC834	Maranello Red 300	-	-	-	MRP-C026		ZP-8007	The most commonly used base color of Ferrari racing and sports cars since the early 1980s.
RC835	Italian Red	-	TS-8	-	-		ZP-1114	Used for painting many street and racing cars by Italian manufacturers such as Alfa Romeo, Fiat, Lancia etc.
RC836	Panigale Red	-	-	N5-C033	-	GC-1160	ZP-1273	Used as the base color of Ducati 1199 Panigale S motorcycles.
RC837	Fluorescent Red	RAL 3026**	TS-36	N5-X017	-	GC-168	ZP-1033	
RC838	Fluorescent Orange		TS-96	-			ZP-1009	
RC839	Gulf Orange	-	-	N5-X008		GC-109	ZP-1259	Used for painting such cars as Porsche 917 and Ford GT40 in the iconic orange/light blue color scheme associated with racing teams sponsored by the Gulf Oil company.
RC840	Jäger Orange	-	-	N5-X022	MRP-C023	GC-117	ZP-1057	Used for painting racing cars sponsored by Jagermeister company.
RC841	French F1 Yellow 1970s-1980s	-	-	N5-C026	-		ZP-1085	Used for painting Renault Formula 1 cars in the 1970s-1980s. Suitable for models RS01, RS10 and RE20.
RC842	Light Blue	-	TS-23	-	-		ZP-1093	
RC843	Tyrrell Blue	-	-	N5-X027	-		ZP-8067	Used for painting Tyrrell Formula 1 cars in the 1970s-1980s.
RC844	Gulf Blue	-	-	N5-X009			ZP-1103	Used for painting such cars as Porsche 917 and Ford GT40 in the iconic orange/light blue color scheme associated with racing teams sponsored by the Gulf Oil company.
RC845	Rally Blue 74F 1997-2002	-	-	N5-C075	-		ZP-1041-74F	Used as the base color of Subaru Impreza WRC cars between 1997 and 2002.
RC846	Rally Blue 02C 2001-2006	-	-	N5-C074	-		ZP-1041-02C	Used as the base color of Subaru Impreza WRC cars between 2001 and 2006.
RC847	British Racing Green	-	-	-	-		ZP-1087	Used as the base color of numerous classic English racing cars.
RC848	Vaillant Green	-	-	N5-C015	-	GC-118	ZP-1276	Used as the base color of Porsche 934 Turbo RSR racing cars sponsored by Vaillant.
RC849	Ninja Green	-	-	N5-C115	-		ZP-1018	Used as the base color of Kawasaki Ninja ZX-RR race motorcycles.
RC850	Holographic Pearl	-	-	-	-			The shade of this color varies according to the color of the previously applied primer or base coat.
